Recall #: N212345940 | High Voltage Battery May Melt or Burn Recall Date: 2021 Aug 20

Recall Description

General Motors has decided that a defect which relates to motor vehicle safety exists in 2020-22 model year Chevrolet Bolt EV and 2022 model year Chevrolet Bolt EUV vehicles. The high voltage batteries in some vehicles may pose a risk of fire when charged to full, or very close to full, capacity.

Remedy

Dealers will replace the high voltage battery pack as parts are available. Until the final remedy is performed, customers who have not had the interim diagnostic software (which automatically limits the vehicle's state of charge) installed should continue to take the following interim

steps: 1. Customers should set their vehicle's high-voltage battery system to a 90% state of charge limitation using Target Charge Level mode. If customers are unable to successfully make these changes, or do not feel comfortable making these changes, customers should visit their dealer to have these adjustments completed. 2. Additionally, we ask that customers charge their vehicle more frequently and avoid depleting their battery below approximately 70 miles (113 KM) of remaining range, where possible. 3. Out of an abundance of caution, customers should park their vehicles outside immediately after charging and not leave their vehicles charging indoors overnight.

This recall was open as of the date/time that this report was generated. For more information, or to find out if the recall has been closed, please contact CHEVROLET or visit [GM's website](#).
